

1. Create a new Wordpress project with name "Mid term exam"

2. Inside the new project, create a custom theme with name "midterm custom theme"

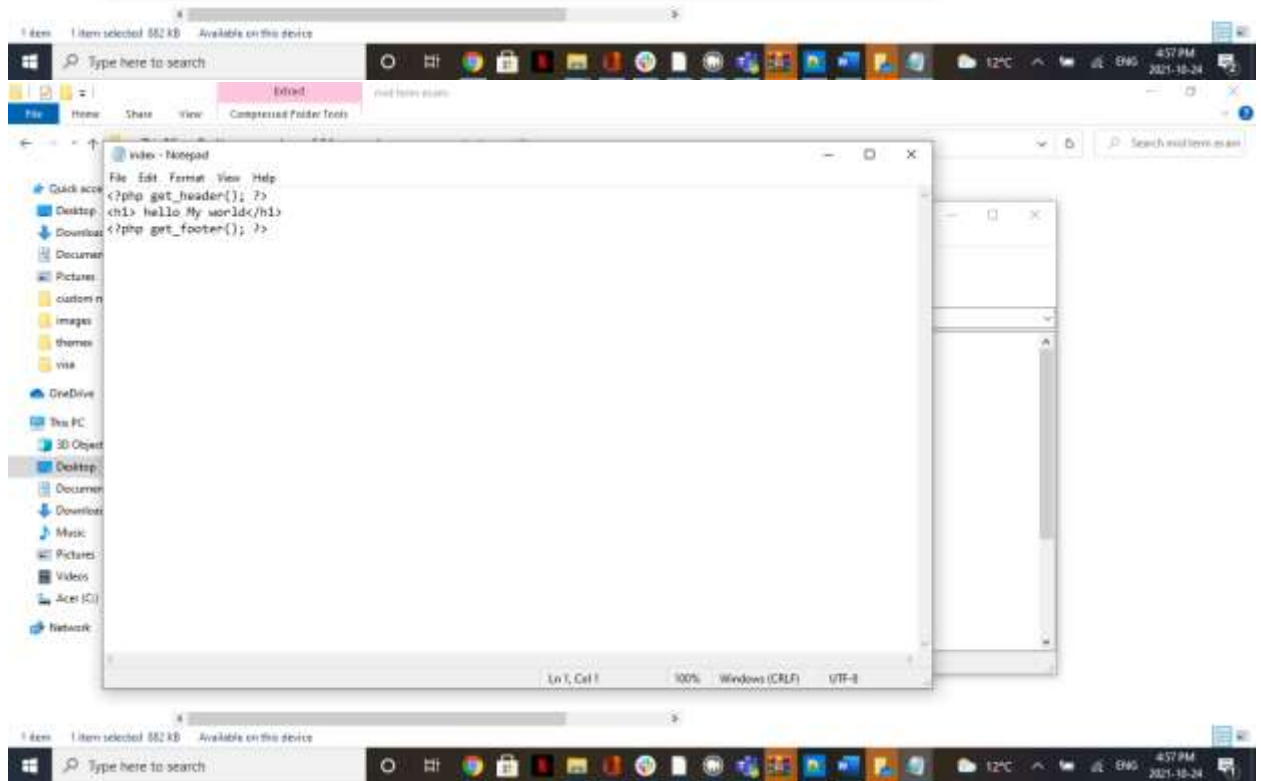

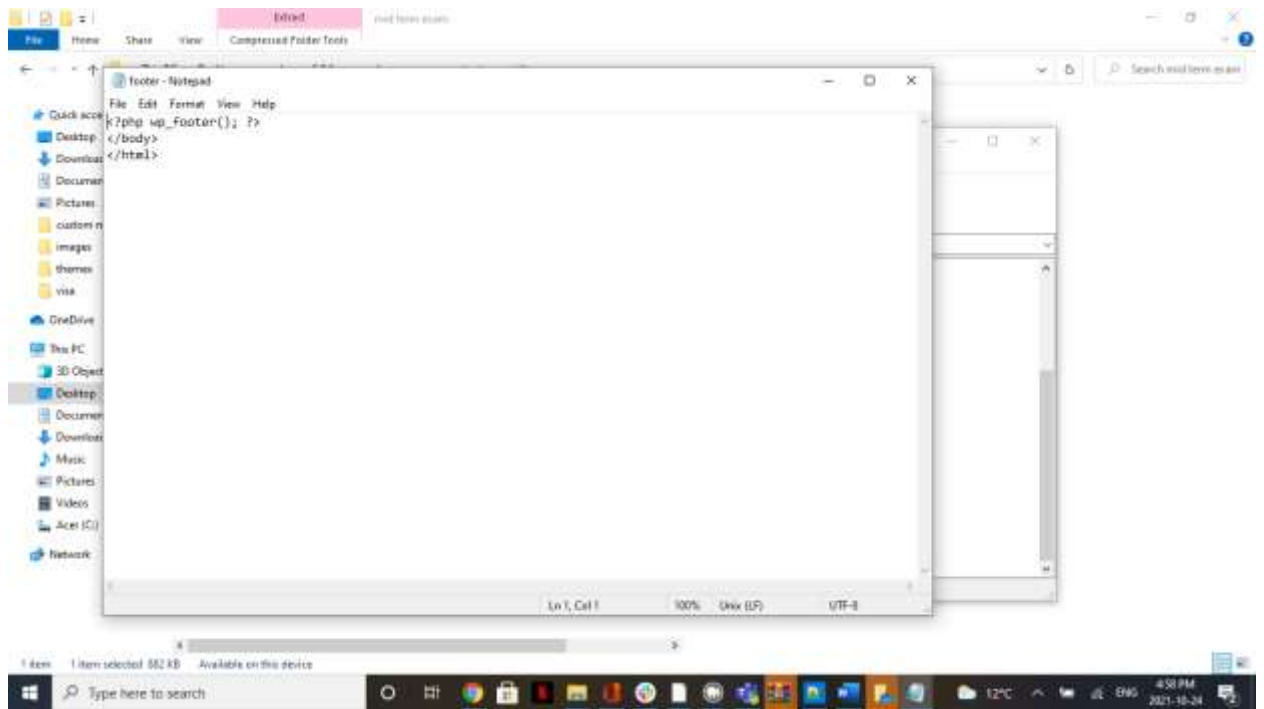

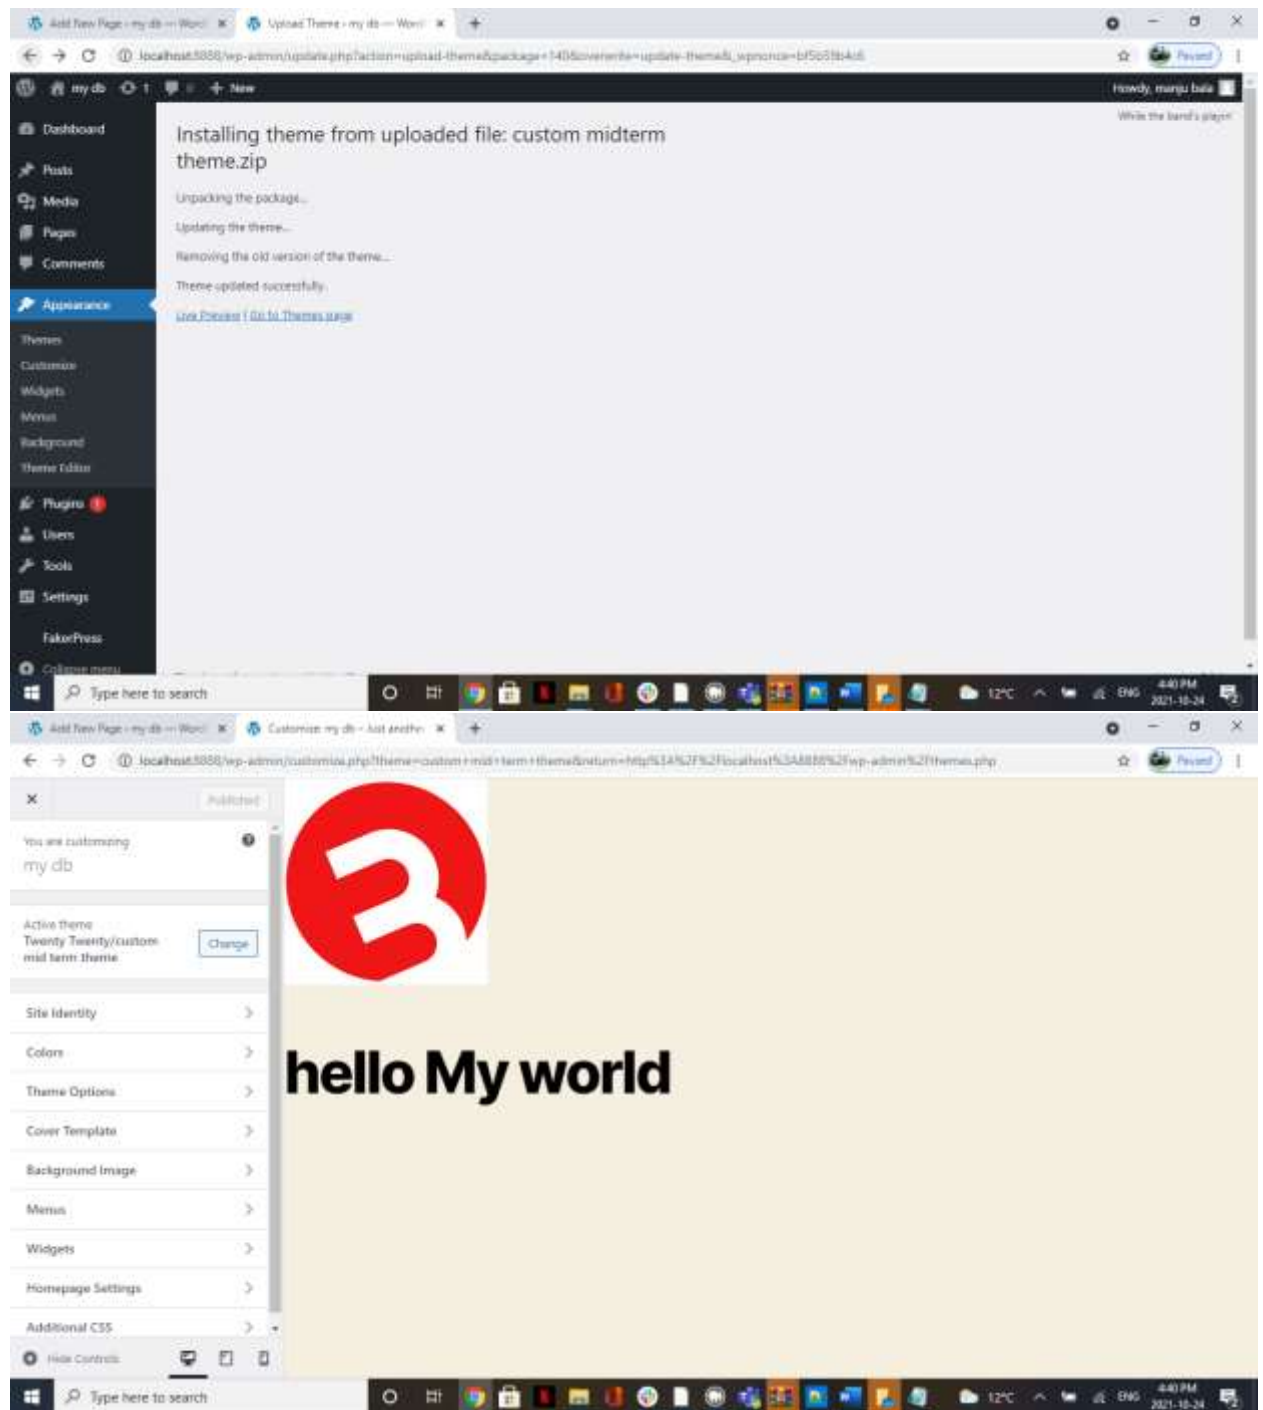

3. Create a new header and footer file accordingly.

4.

4. Use Fakerpress to create 10 fake posts.

The top screenshot shows the WordPress 'Posts' list table. The table has columns for Title, Author, Categories, Tags, and Date. The posts are listed in a table with checkboxes for each row. The bottom screenshot shows the 'Meta Field Rules' configuration page for the 'FakerPress' plugin. The page has a form with fields for Type, Name, and Configuration. The 'Type' is set to 'Attachment'. The 'Name' is set to '_thumbnail_id'. The 'Configuration' is set to 'Attachment ID'. There are also fields for 'Weight', 'Range of possible width sizes for the image', and 'Range of possible height sizes for the image'. A 'Generate' button is at the bottom.

Meta Field Rules

Use the fields below to configure a set of rules for your generated Posts

Type	Attachment	
Name	_thumbnail_id	
Configuration	Attachment ID Saved Data	
	<input checked="" type="checkbox"/> Placeholder <input checked="" type="checkbox"/> Lorem Picsum	
	Which image services will the generator use?	
90	Weight	
e.g. 350		e.g. 900
	Range of possible width sizes for the image	
e.g. 125		e.g. 550
	Range of possible height sizes for the image	

Generate

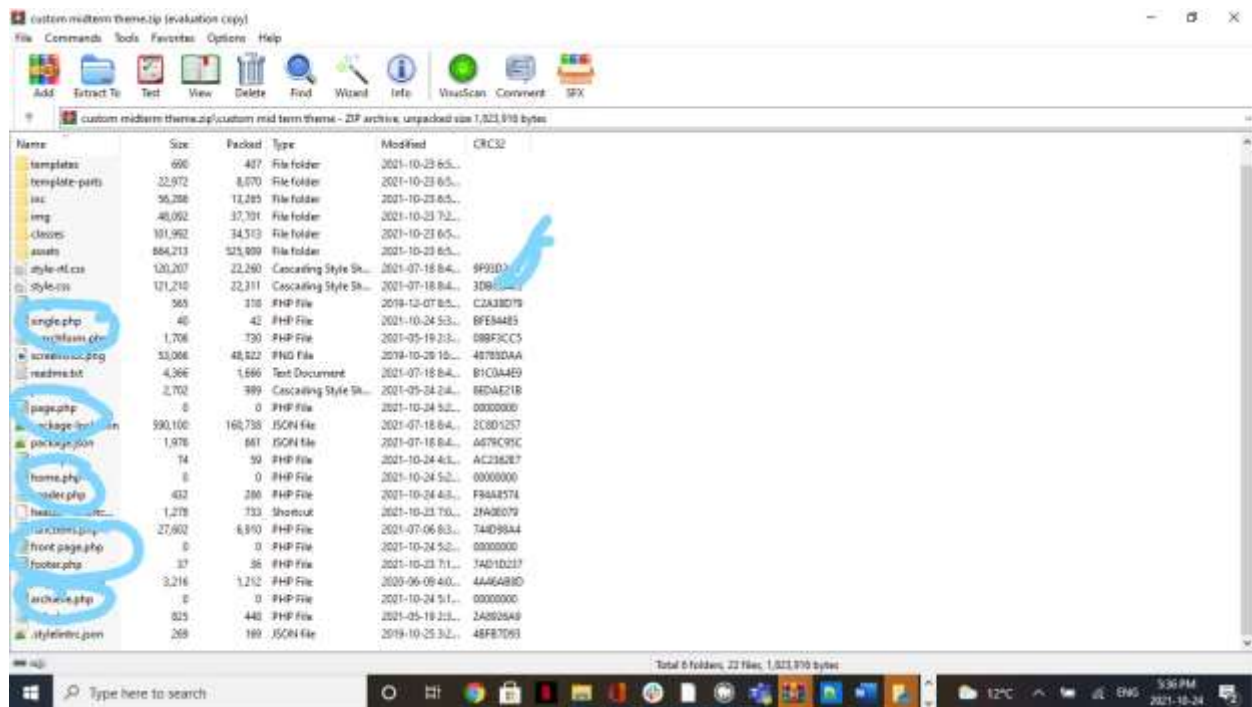

Failed 10-27 10 301 103 105 107 109 111 113 115

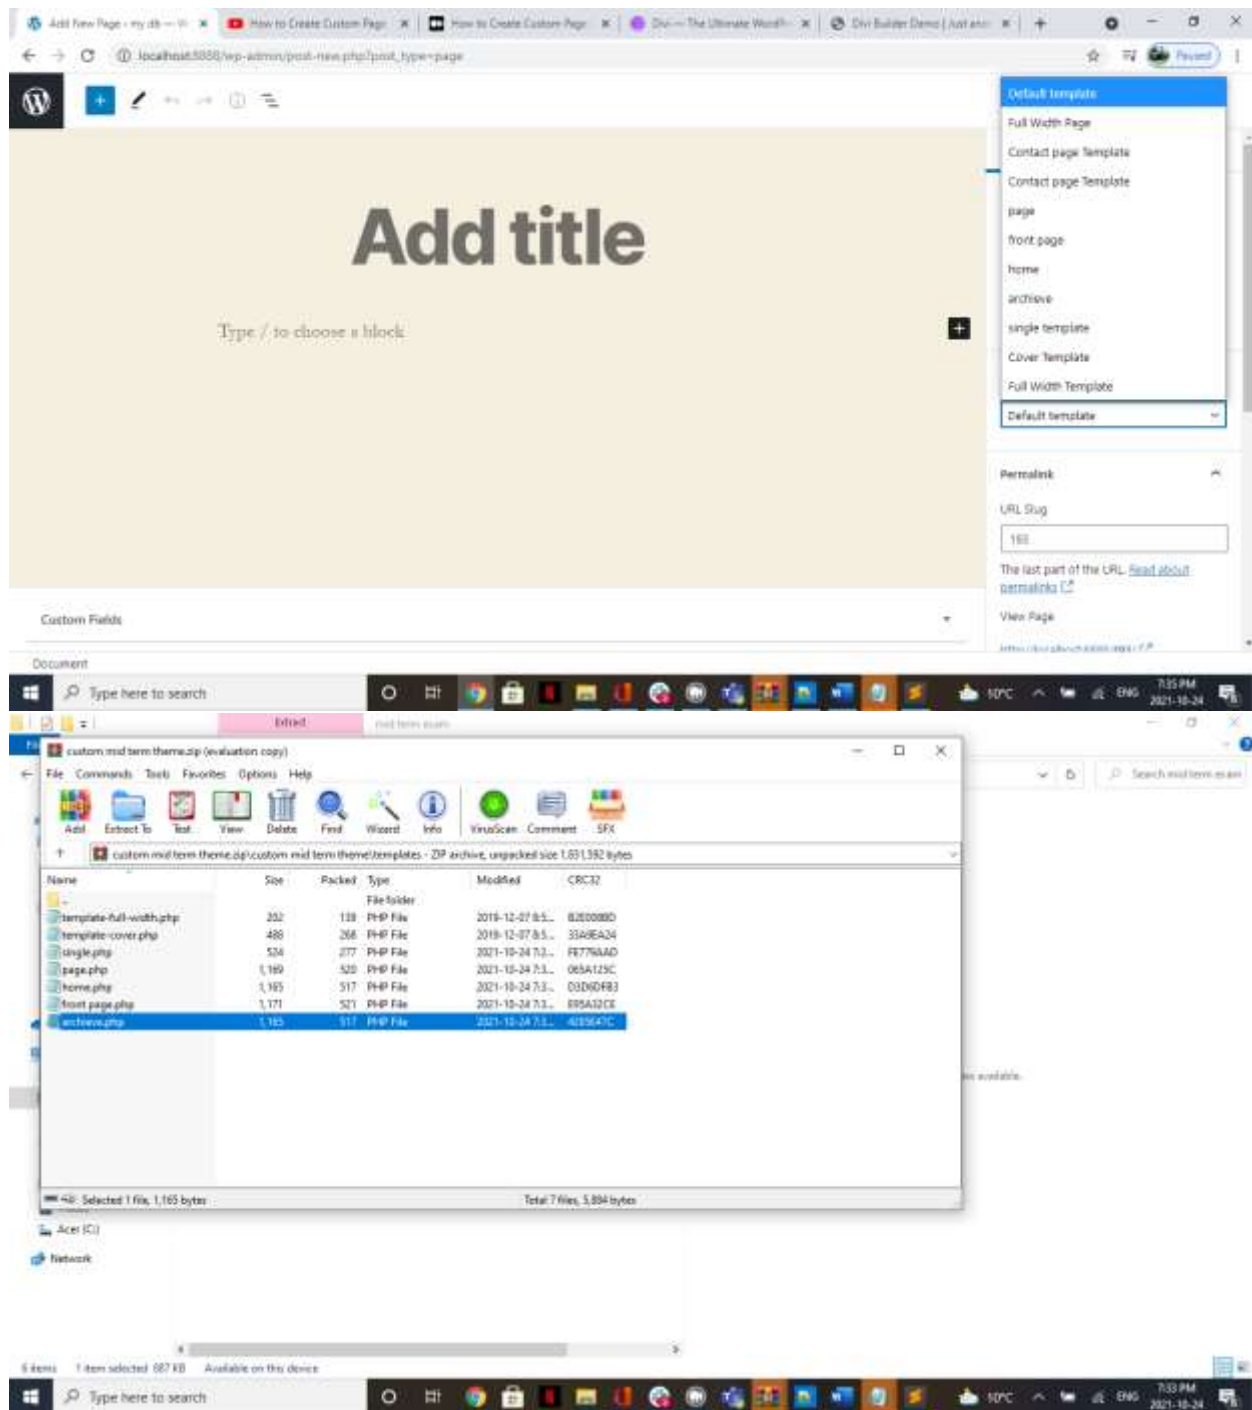

6. Create a page called "Contact Us" and set it as "home page"

7. Create the 5 necessary template files.

8. Make sure front-page.php is now the home page.
